Summary

Backend Developer with 3 years of experience building scalable and secure backend systems using **Java**, **Spring Boot**, **Microservices**, **Hibernate**, and **AWS**. Strong expertise in developing **RESTful APIs**, implementing **JWT-based authentication**, and designing **Kafka-driven event processing** systems. Experienced in **CI/CD pipelines** using **Jenkins** and delivering cloud-native solutions with third-party integrations such as **Stripe**, **SendGrid**, and **Twilio** within **Agile (Scrum)** environments.

Experience

AppSierra 3.2 Years
Java Developer *Hybrid*

- Contributed to the development and enhancement of a large-scale travel booking platform used by real customers in a production environment.
- Built and maintained backend features across multiple microservices, focusing on clean code, scalability, and reliability.
- Worked closely with frontend, QA, and DevOps teams to deliver features on time and resolve cross-team dependencies.
- Participated in design discussions, implemented business requirements, and handled bug fixes and performance improvements.
- Monitored live systems, analyzed logs and traces, and resolved production issues to ensure system stability.
- Actively followed Agile (Scrum) practices, including sprint planning, daily stand-ups, reviews, and retrospectives.

Technical Skills

Programming & Frameworks: Java, Spring Boot, Spring MVC, Spring Security , Spring Cloud , Hibernate , Feign Client , RESTful APIs, Microservices Architecture.
Database & Caching: MySQL, PostgreSQL, ER Diagrams, Redis Cache
Cloud & DevOps: Docker, Kubernetes (EKS), Terraform, Jenkins (CI/CD), Github Actions, Git
Messaging & Communication: Apache Kafka, REST APIs, Feign Client for communication in microservices, Eureka Server, API Gateway
Tools & Platforms: JIRA, Postman, Swagger, Intellij IDEA, STS, Maven, Gradle, Git, GitHub.
Monitoring & Logging: SLF4J, Logback, Zipkin, Spring Boot Admin, ELK.
Development Process: Agile Methodology(Scrum)-Sprint Planning, Daily Stand-ups, Reviews, Retrospectives.

Projects

loveholidays.com | *Spring Boot*, *Microservices*, *AWS*, *Kafka*, *React*, *Elasticsearch*, *Redis* 3 Years

- Designed and developed a large-scale travel booking platform using **Microservices Architecture**, **Domain-Driven Design (DDD)**, and **Event-Driven Architecture**.
- Followed **Agile (Scrum)** methodology with daily standups, sprint planning, and issue tracking via **JIRA**.
- **User Service:** Implemented secure authentication and authorization using **Spring Security + JWT**, role-based access control (Admin/Customer), persistent session handling, and structured logging using **SLF4J**.
- **Hotel Service:** Developed CRUD operations for hotel listings, amenities, rules, and images. Integrated **AWS S3** for image storage with presigned URLs and used **Hibernate/JPA** for ORM and validations.
- **Room Inventory Service:** Managed room availability, room types, and dynamic pricing. Implemented date-based inventory tracking with optimized queries and improved performance using **Redis caching**.
- **Booking Service:** Built a robust booking engine with availability validation, confirmation number generation, and cancellation workflows. Published booking events via **Kafka** to Payment and Notification services.
- **Payment Service:** Integrated secure payment processing using **Stripe SDK** (sandbox and production environments).
- **Search & Filter Service:** Implemented full-text hotel search using **Elasticsearch** with multi-criteria filters including price range, star rating, amenities, and room type.

- **Review & Rating Service:** Enabled users to add, edit, and delete reviews and ratings. Aggregated ratings were used in hotel ranking algorithms.
- **Notification Service:** Implemented real-time event-driven notifications using **Kafka**, triggering SMS and email notifications via **Twilio** and **SendGrid**.
- **Infrastructure & DevOps:** Implemented **API Gateway** for routing, security, and rate limiting; **Eureka Server** for service discovery; **Zipkin** for distributed tracing; and **Spring Boot Admin** for health monitoring.
- Provisioned AWS infrastructure (**EC2, S3, IAM**) using **Terraform**. Dockerized all services and deployed on **Kubernetes (EKS)** for scalable production deployment.
- Designed system architecture using **ER Diagrams** and **UML Class Diagrams**. Used **Feign Client** for inter-service communication with fault-tolerant fallback mechanisms.
